

At Innovex, we know that managing your oil and gas assets is about more than just keeping things running smoothly. Our **Asset Lifecycle Management** service is here to help you unlock the full potential of your assets from start to finish—whether it's during procurement, operation, or even decommissioning. We strive for operational efficiency, cost savings, and, above all, safety.

Connector Recertification

We offer comprehensive teardown services for various connector types, including BOP, LMRP, and tieback connectors. Our meticulous process involves dimensional inspections, magnetic particle inspections, liquid penetrant examinations, replacement of all consumables, blasting, recoating, and reassembly of components—all in strict accordance with API 16R specifications. Once complete, we provide a Certificate of Conformance to ensure your equipment meets the highest standards.

For those needing quicker turnaround times, we also offer condition-based monitoring of equipment while it's still installed. Depending on the findings, we can issue either a Certificate of Service or a Statement of Fact. To maintain optimal performance and compliance, we recommend that drilling contractors recertify their connectors in conjunction with their BOP stack recertifications, as per API standards.

Capital Drilling and Production Equipment

For drilling contractors worldwide, Innovex is your trusted partner for the recertification of rig equipment. Whether you need simple function tests, thorough inspections, recoatings, complete overhauls, or seal replacements, our experienced teams are here to help. We aim to maximize the value of your capital assets by providing five-year statements of conformity, service, or fact, all in line with the required specifications.

- Inspection, Reconditioning, Recertification, and (Re)installation: Ensuring your equipment is always in top condition.
- Drilling, Production, Completion, and Workover Riser: Comprehensive services for all stages of your operations.
- Diverters and Tensioner Systems: Maintaining critical components for optimal performance.
- XT's, Spools, Valves, and Actuators: Comprehensive refurbishment services for all critical components.
- Compliance with API Standards: Adhering to API 16AR, Standard 53, and API Standard 64 to meet industry regulations.

Storage, Preservation, and Maintenance

Innovex has the space, facilities, and capabilities to accommodate a wide range of equipment types flexibly. Onsite or offsite, covered or uncovered, we'll ensure that your assets are protected and performance-ready, with necessary inspections and fluid levels properly maintained. We also offer preservation wrapping upon request.
