

Quik-Stab® Connectors offer unmatched speed and reliability, providing fast make-up and robust weight-set connections for large-diameter tubulars. Engineered for efficiency, these connectors allow high-angle stabbing, self-alignment, and automatic locking of pin and box—ideal for applications requiring fast, rotation-free make-up.

The multiple load shoulders on the lock ring and box provide maximum load-bearing areas with minimum lock ring travel. This means higher load capacity with more load-carrying steel per inch of cross-section than conventional lock ring type connectors. The design of the lock ring provides a positive lock of the pin and box members. The dual taper ensures that the lock ring is moved fully into the box grooves and remains there under all load conditions.

Quik-Stab® Connectors enhance operational efficiency while reducing environmental impact. With a blend of innovation and field-proven reliability, they are your trusted solution for efficient casing operations.

Features

- High-Angle Stabbing: Facilitates easy handling in challenging angles.
- Self-Aligning: Ensures precise alignment for flawless connections.
- Automatic Positive Lock: Secure locking mechanism for added safety.
- Mechanical Release: Simplifies disassembly, saving time and effort.
- No Rotation Necessary: Streamlines operation for faster deployment.
- High Strength and Pressure Sealing: Supports demanding environments.
- Low Torque Requirement: Reduces mechanical stress during installation.
- Drivable Design: Versatile for multiple operational needs.
- Anti-Rotation Device Compatibility: Customizable to prevent loosening.
- Reusable and Easily Weldable: Economic and flexible for field applications.
- Fully Tested, Field-Proven Performance: Trusted reliability with a proven track record.
