

The **Warpig™ Cementing Plugs** are your bread and butter cementing plugs for standard cementing operations with additional features to aid in quick drill outs. Top and bottom plugs available.

Warpig™ Cementing plugs are designed and constructed to be an extremely fast drilling plug for standard cementing operations. The patented recessed non-rotation features will clutch onto the float collar and prevent the plug from acting as a bearing during drillout, but can also be used on any float collar with a flat face. The plug is universal.

## FEATURES AND BENEFITS

---

US Patent Number: US12234703B1.

---

Non-Rotation features that clutch together during drill out.

---

Patented Non-Rotation Features are inset such that they won't inhibit the plug from landing and sealing onto a flat-faced landing collar.

---

Materials are specifically chosen for drillability.

---

Maximum bump rating up to 5,000 psi (size depending).

---

Bottom Plug disk rupture 700 psi.

---

300°F temperature rating.

---

Supports surface/intermediate casing 7"- 20".

---
