Pumping Wellhead

Dependable solutions for artificial lift applications designed to excel under pressure. From rod pumps to gas lifts, we provide wellheads for every lift system.

Our **Pumping Wellhead** is complete with all required equipment for artificial lift applications. A wellhead configured for a Rod Pumping Application comes complete with a polish rod BOP (Blowout Preventor), pumping tee, stuffing box, and pressure swift.

Additionally, we carry a full line of wellhead equipment to accommodate other artificial lift applications such as progressive cavity pumps, electric submersible pumps, and gas lift designs. Depending on well conditions, Innovex's pumping wellhead equipment is available with threaded connections, flanged connections, or a composite pumping system to save time, space, and reduce leak paths.

### Specifications

- Pressure Rating Range: 2000 PSI - 5000 PSI
- Tubing Size Range: 2 3/8" - 3 1/2"
- Temperature Range: -50 (L) - +250 (U)
- PSL Ratings: 1 and 2
- Material Class: DD – EE
- Trim Levels: Carbon Steel, stainless Steel, and corrosion resistant alloys
- Elastomer Options: Customized to well conditions
