

The **SelectSET Ranger Liner Hanger** is a premium offering that incorporates the robust, field proven Ranger hanger and hydraulic release running tool with the added benefit of a mechanically locked design.

Developed specifically for today’s boundary pushing environment, the Ranger Liner Hanger system has proven to be superior for extended reach horizontal wells and high-pressure gas wells where system integrity is critical for drilling and completion operations. The patented locked system allows for optimum running and circulating conditions without the risk of prematurely setting hydraulic equipment.

The high-torque capabilities enable the system to be reamed-in and drilled through tight spots while the integral bearing package allows the liner to be rotated while cementing.

Features

- Mechanically locked system
- Hydraulic actuation
- Unlimited circulation pressures
- Low setting and shear out pressures
- Designed for highest loads
- Pocketed slip system
- Integral bearing for rotation while cementing

Applications

- High pressure wells
- Loss circulation wells
- Tight formations
- Drill in/Ream in liners
- Float in applications
- MPD scenarios

Size (inches)	Casing Weight	Maximum OD (inches)	Minimum ID (inches)
7.000 x 9.625	9.625" 40-58.4 PPF	8.254	6.164
