

Innovex offers a complete **Spooling Services Division** including ESP Cable Spooling, CT, Capillary and Tech Wire Spooling, and ESP Cable Splicing, and a team of experienced technicians bringing the highest level of service execution to your well.

Spooling Services

All our spooling, Capillary and CT equipment is customized and regularly maintained to ensure the highest level of efficiency and safety possible. We can install ESP Cable, Capillary Line and CT line simultaneously - or independently - to help you meet your objectives. Our complete line of materials and services combines superior customer service with our ability to complete both ESP spooling and CT projects from bottom to top.

- 2205 stainless steel as the standard for capillary lines enhances H₂S and CO₂ resistance (Alternate materials are available upon request).
- Working partnerships with several ESP pump cable suppliers ensure Innovex will have the cable you need when you need it.

Dedicated Equipment

Our dedicated fleet of trucks and equipment are on standby ready to support your installation, including onsite splices, safely and efficiently. Our Dual Spooling trailer allows our customers to run a single ESP cable and a secondary line simultaneously.

- Reduce rig footprint, technicians and HSE exposure
- Increase savings, efficiencies, and reliability on location

Banding Service

Our Production Solutions team brings years of experience along with knowledge of the latest spooling techniques to provide the highest level of service execution at your well. Innovex utilizes pneumatic banders for speed and applies 316 SS bands as the standard and, also offers monel banding for harsh well conditions.
