

Successful First Run with SubZERO

Eliminate the Need for Subs

PRODUCT

SubZERO

PRODUCT LINE

Well Construction

LOCATION

Gulf of Mexico

A major offshore operator in the Gulf Of Mexico utilized the Innovex SubZERO™ on-pipe centralization solution for a successful, cost savings installation.

Innovex's SubZERO is an on-pipe close tolerance centralization solution that eliminates the need for costly and time-consuming centralizer subs.

The operator was able to **save over \$300,000** as a direct result of the efficiencies provided by SubZERO.

- **Shorter Lead Time** – lead time of SubZERO vs standard centralizer subs was reduced by over 60%.
- **Smaller Inventory Footprint** - shorter lead time allowed for more accurate well planning, eliminating the need to store excess inventory on the shelf.
- **No Sourcing Complexity** – SubZERO was applied directly onto operator OCTG pipe, eliminating the need to source additional premium grade material.

Give your local Innovex representative a call to learn how SubZERO can reduce your operational costs and lead times on your next well.
