Surface Wellhead | Thermal Wellheads

**PRODUCT**

Steam Assisted Gravity Drainage (SAG-D)

The Innovex **Injector and Producer Well Pair** delivers proven performance, tailored solutions, and unparalleled reliability to optimize your thermal operations. Our wellheads incorporate specialized ports for electrical feed-through cables and instrumentation, allowing seamless integration within modern production facilities. Alternate configurations are available, the Circulation Wellhead being one of the producer configurations.

**FEATURES**

---

Tailored for all temperatures, reaching up to 650°F (343 °C).

---

Backed by an extensive track record in steam-assisted oil sands production in Canada.

---

Suitable for both power generation and district heating applications.

---

High-temperature valves and seals rated to 650°F.

---

Large-diameter through-bores are available for high flow rates.

---

Facilities instrumentation such as Electric Submersible Pumps (ESPs), Distributed Temperature Sensing (DTS), and Distributed Acoustic Sensing (DAS).

---

DTS and DAS can be replaced without pulling the tubing string or interrupting production.

---
