

The Innovex ThunderSTICK Wet Shoe System delivers unmatched reliability in toe initiation with a field-proven 99% success rate.

This innovative integrated design combines both collar and shoe functionality, reducing your shoe track length by up to 36% while eliminating the need for expensive thread connections.

Experience the confidence of performing frac operations closer to the shoe with high injection rates, all while mitigating the need for TCP and toe sleeves. The rigid ball seat design enables high casing test pressures, completely eliminating the failure mode associated with testing on wiper plug mandrels.

Features and Customer Benefits

- Shorter track ~15' vs. 42-54'.
- Reduce premium connections.
- Frac closer to the shoe.
- Allows for high injection rates.
- Rated up to 15k psi.
- Cement & toe prep in one.
- Eliminates the need for a Toe Sleeve.
- Rigid ball seat for casing test eliminates wiper plug testing failure.
- Eliminates the need for TCP.
- More exposure for the formation.
- Modular 2-3 plug system is available.
